

PRIMEDIAGNOSTICS

URINARY TRACT INFECTIONS (UTI) DIAGNOSTICS

Powering Informed Patient Health Decision Making

Urinary Tract Infections (UTI) are often associated with severe pain during urination caused by bacterial infections, which may cause damage to the kidneys and urethra in severe cases. Such infections often occur in the elderly, especially if they are catheterized. It is thus essential to detect the exact pathogen to facilitate the proper treatment for better patient outcomes.

Specially developed for effectively detecting UTIs, the UTI PDx Test by Prime Diagnostics can detect all common bacterial infections and pathogens, including Candida infection, E. coli, Morganella, and more.

Our real-time PCR pathogen diagnostics solutions simultaneously detect all common types of pathogens in one reaction and give you a detailed review of the pathogens present in a urine sample and their quantity .

URINARY TRACT INFECTIONS

(UTI) DIAGNOSTICS TEST MENU

Uncomplicated Panel

- Enterococcus faecalis
- Klebsiella pneumoniae
- Proteus mirabilis
- Staphylococcus saprophyticus
- Escherichia coli
- Klebsiella Oxytoca
- Proteus Vulgaris
- Enterococcus faecium

UTI Additional Pathogens

- Enterobacter cloacae
- Mycoplasma hominis
- Pseudomonas aeruginosa
- Staphylococcus aureus
- Ureaplasma urealyticum
- Citrobacter Freundii
- Candidiasis Panel: albicans
- Candida glabrata
- Candida lusitaniae
- Candida auris
- Morganella morganii
- Providencia stuartii
- Serratia marcescens
- Streptococcus agalactiae
- Enterobacter aerogenes
- Acinetobacter baumannii
- Candida tropicalis
- Candida krusei
- Candida parapsilosis

Please note: For the most accurate panels and pathogens, refer to our latest requisition form.
