

PRIMEDIAGNOSTICS

SEXUALLY TRANSMITTED INFECTIONS (STI) DIAGNOSTICS

Powering Informed Patient Health Decision Making

Sexually transmitted infections (STIs) are infections passed from one person to another through sexual contact. The contact is usually vaginal, oral, or anal sex. But sometimes, they can spread through intimate physical contact.

Sexually transmitted infections may lead to the infection of the urogenital tract, chlamydia, infertility, vaginosis, uterine cancer, and even death. To detect Sexually Transmitted Infections (STI) in patients, we have also developed the UTI-STI-PDx test, which detects and effectively identifies multiple STI pathogens.

Our real-time PCR pathogen diagnostics solutions simultaneously detect all common types of pathogens in one reaction and give you a detailed review of the pathogens present in a urine swab, swab, or vaginal swab sample and their quantity

SEXUALLY TRANSMITTED INFECTIONS

(STI) DIAGNOSTICS TEST MENU

Urine STI Panel

- Mycoplasma genitalium
- Ureaplasma urealyticum
- Ureaplasma parvum
- Mycoplasma Hominis
- HSV2
- Trichomonas vaginalis
- Chlamydia trachomatis
- Neisseria gonorrhoeae
- HSV1
